

HOW DIGITAL PATHAOLGY CAN IMPROVE HEALTHCARE IN SEMIURBAN AND RURAL AREAS

Kamlesh R Patel

Gujarat University, India

Pathology branch is well known unorganized sector and 60 to 70 % medical treatment is dependant on it. So to meet growing demand and bring together inhouse pathologist and other consultants digitalization is very important. As we see evolution of pathology after inventing microscopy to complete digital platform we can able to connect them all. We manage remote units at five levels to ensure highest accuracy and fastest reports. Through technology now it is possilbe to reach to rural and suburban areas where good heathcare facilities not available.
