SURGERY VERSUS MEDICAL MANAGEMENT OF ICH CLINICAL CONSIDERATIONS

Sameh Elmorsy Hassan Elmorsy

El-Matrya Educational Hospital

The second most common form of stroke (\approx 15–30% of all strokes) (earlier estimates: 10%1), and the most deadly. Approximately 12–15 cases per 100,000/yr. alot of risk factors have been identified, according to site and GCS prognosis will be expected, when size exceeds 30cc will you operate it or not, with advancement of different facilities to control blood pressure and anaesthesia make surgical options is more preferable, but you have to choose different plan for every case,how to plan for every case it needs a lot of evaluation ,concept of that with sizable ICH you will choose medical management due to bad prognosis must be changed according to every case circumstances, clinical considerations has the upper hand for what to do to every patient

Biography

I have an experience of Neurosurgery for 9 years in educational hospitals, studying MD of Neurosurgery cairo university,Msc of Neurosurgery , member of ESA os spine,member of ESNS of neurosurgeons, alot of conferences about Neurosurgery and spine Administrator of Egyptian&World Neurosurgeons@Community on telegram
